

Documents to be provided by the bidder	Comments or bidder document N°
a) A clear description of the endstation architecture (+ presentation of sketches).	
b) Choice of control system solution for rotation stage demonstrating EPICS compatibility.	
c) The SESAME technical specifications signed for agreement and as confirmation of acceptance of every clause. The bidder is expected to approve the technical specifications as a whole or to clearly mention in the offer the documents (or paragraphs) that are not approved. The bidder must clearly state in the tendering documents that all requirements indicated in the SESAME specifications will be met and fulfilled. The bidder will indicate also the means by which these will be implemented.	
d) A certificate that the applied operational quality assurance system is in accordance with ISO 9001 or 9002 or 9003 or an equivalent national standard.	
e) A presentation of past similar projects which required design and manufacture of high precision beamline equipment and mastering micromechanics specifications compatible to those specified in this CfT for motion components.	
f) An organisation chart for the contract, including the list of persons who will work on this project and the name of the contract manager (including a CV).	
g) Indication of work to be subcontracted with identity of all subcontractors and details about their experience with similar projects.	
h) Comments regarding the SESAME production schedule in relation to the contractor's work capacity. Tenderers are invited to propose, as an alternative, a reduced schedule respecting the two phases of the project.	
i) The description of the setup and method to perform tests of the motorisation. The bidder will describe how the different motions will be characterised and which accuracy will be achieved.	
j) Agreement of the bidder to assemble the different lots contained in the offer.
